Documents 1 and 2 disclose the fact that compounds which are active ingredients in the inventions in the present international application are β_3 adrenoreceptor

agonists.

Documents 3 and 4 disclose the activity of β_3 adrenoreceptor agonists against urinary incontinence and against urinary frequency (disclosure of the invention).

Documents 5 and 6 disclose the existence of β_3 adrenoreceptors in the human urinary bladder, the fact that the human urinary bladder is relaxed by β_3 adrenoreceptor stimulants, and the fact that β_3 adrenoreceptor stimulants have been discovered to be useful as prophylactic or therapeutic agents for urinary frequency and incontinence, etc. (document 5, paragraph [0007]; document 6, background art).

Documents 7 and 8 disclose the existence of β_3 adrenoreceptors in the human urinary bladder, and the fact that β_3 adrenoreceptor agonists would probably have a relaxing effect on the urinary bladder and are effective for incontinence.

Claims 1-10

The inventions set forth in claims 1-10 involve an inventive step relative to documents 1-8, cited in the international search report.

The present application relates to "therapeutic agents for an overactive bladder"; however, in this there is no substantial difference from "therapeutic agents for incontinence" or "therapeutic agents for urinary frequency", etc. As regards this feature, the use of such compounds as "therapeutic agents for an overactive bladder" would not in itself require creative skill, since it is known that β_3 adrenoreceptor agonists have a relaxing effect on the urinary bladder, and can be used for their activity against incontinence and against urinary frequency, etc. (documents 3-8) However, although it is clear from documents 1 and 2 that (R)-2-(2-amino-thiazole-4'-[2-[(2-hydroxy-2-phenylethyl) amino]ethyl]-

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No. PCT/JP 03/14065

acetic acid anilide (free or as a salt, which the active ingredient in the present application) is a β_3 adrenoreceptor agonist, the fact that the compound in question exhibits an activity at least 270 times that of the typical β_3 adrenoreceptor agonist CGP-12177A indicates that "therapeutic agents for an overactive bladder" containing such an ingredient offer an effect that is greater than could be predicted from the state of the prior art.
